

## DAVIS EXPEDITION FUND

### REPORT ON EXPEDITION / PROJECT

**Expedition/Project Title:**

### **Plant collecting in Puerto Princesa National Park World Heritage Site**

---

**Travel Dates:**

28 May 2012 – 12 June 2012

---

**Location:**

Palawan, the Philippines

---

**Group Members:**

Mark Hughes

---

**Aims:**

To collect plants for taxonomic and biographic study

---

---

#### **Outcome (not less than 300 words):-**

A two-week plant collecting expedition was mounted to the Philippine island of Palawan during late May and early June 2012. The island is of particular interest botanically, having a highly endemic flora and being positioned at the nexus between eastern and western Malesia. A total of 108 herbarium collections was made, each with an associated silica dried sample for DNA extraction (see appendix). The collections concentrated on plant groups of special research interest to the RBGE, namely *Begonia*, Gesneriaceae, Sapotaceae and Zingiberaceae; general collections of other flowering plants were also made. Duplicates of the specimens have been deposited at E and PNH herbaria, and others will be distributed once all have been identified to species and any new taxa described. The collections cover both the limestone flora of the Puerto Princesa Underground River National Park and the strikingly different low-canopy flora on the adjacent ultramafic rock on Mt. Bloomfield.

At least three new species of *Begonia* were found, some being very narrow endemics such as one peltate-leaved species which has the bulk of its population in only one site at the cave entrance to an underground river. These new species will be named in collaboration with botanists from the Philippine National Herbarium and the University of Manila; it is planned to give them names reflecting local tribes to highlight the value of plant conservation in Palawan. In addition we are collaborating on producing a booklet on the botany of the Puerto Princesa Underground River National Park which can be used locally to promote eco-tourism and conservation.

## Introduction

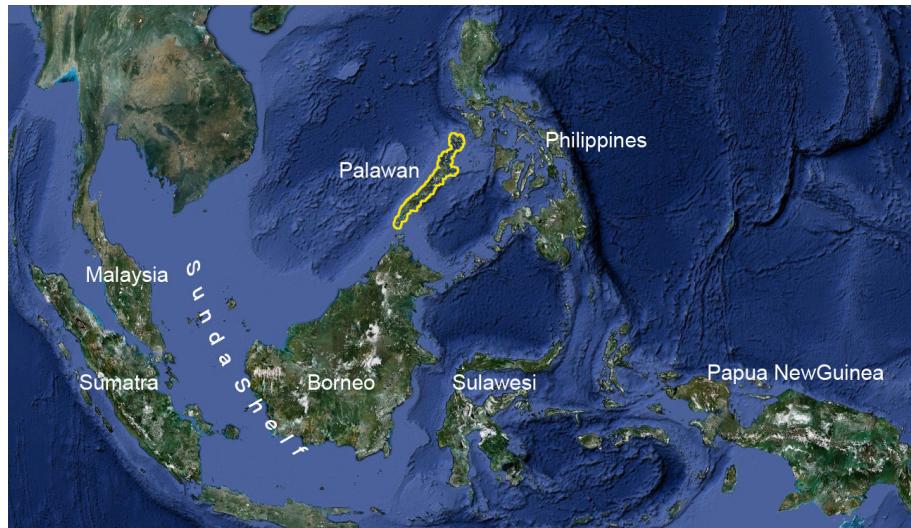

Fig. 1. The position of Palawan at the interface of eastern and western Malesia.

Palawan is a key player in the origin of the Philippine flora, as highlighted by Huxley's modification of Wallace's line which runs between Palawan and the rest of the Philippine archipelago. Palawan lies at the north-eastern margin of the Sunda Shelf (an extension of the Southeast Asian continental shelf) and represents the closest land mass that could have acted as link from the Philippine archipelago to the floras of continental Southeast Asian origin.

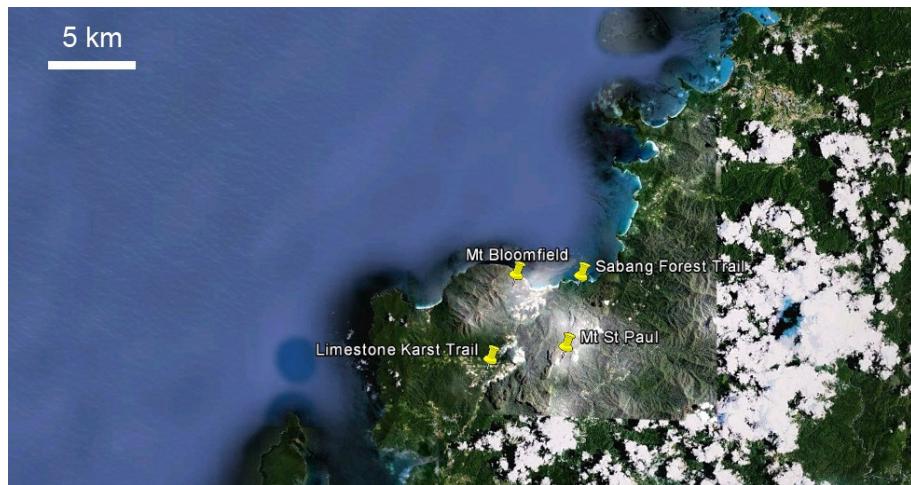

Fig. 2. Collection localities visited during the expedition, in the vicinity of the Puerto Princesa Underground River National Park.

The expedition aimed to collect vascular plants (herbarium specimens and DNA material) of the highly endemic limestone flora of Palawan, concentrating on the Puerto Princesa Underground River National Park (PPURNP) World Heritage Site, a region of karst limestone that reaches 1000 m altitude. Silica-dried material from this area will contribute to molecular phylogenetic / biogeographic research in the RBGE core groups *Begonia*, Gesneriaceae, Sapotaceae and Zingiberaceae. Large Asia-wide datasets have been built up for these taxa at RBGE, yet the Philippines and in particular Palawan remain a sampling gap. The collections from this expedition will make a significant impact into our understanding of the biogeography of the Philippines and Malesia.

## Itinerary

27 May	Arrive in Manila
28 May	Meet counterparts, fly Manila-Puerto Princesa (Palawan). Drive to Sabang, arrange accommodation, meet guides.
29 May	Beach forest trail from Sabang to Underground River entrance.
30 May	Eastern PPURNP, river inflow trail.
31 May	Mt Bloomfield ascent
1 June	PPURNP lowland trail
2 June	Drive to Puerto Princesa to pick up food and camping supplies
3 June	Begin ascent of Mt. St. Paul. Porters are hungover; M. Hughes carries most of equipment. Porters fail to bring tarpaulin as directed previously, makeshift camp set up at 600 m.
4 June	Approach the summit of Mt. St. Paul, return to previous camp.
5 June	Descend mountain, return to Sabang village by nightfall.
6 June	Specimen processing and packing
7 June	Drive to El Nido in the north of Palawan
8 June	Boat trip round coastal karst formations
9 June	Drive to Puerto Princesa
10 June	Fly to Manila
11 June	Work in Manila herbarium
12 June	Fly to Kuala Lumpur

Fig. 3. The limestone peak of Mt. St. Paul, 1028 m above sea level, viewed from the beach near Sabang village.

Fig. 4. Danilo Tandang at Camp 1, about 600 m on the northern flank of Mt. St. Paul.

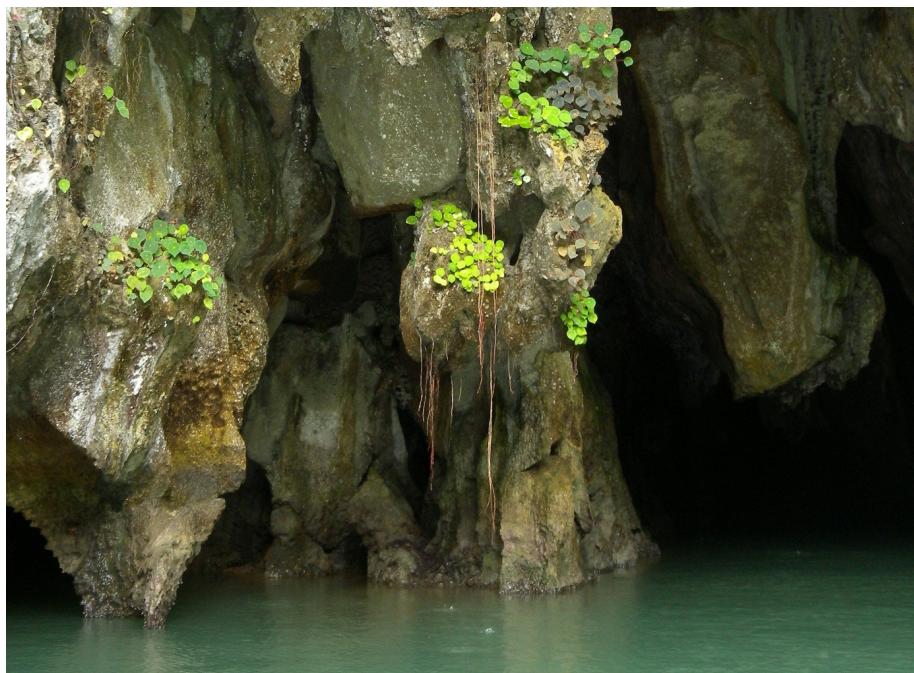

Fig. 5. A new species of peltate *Begonia*, growing abundantly at the entrance to the underground river in PPURNP.

Fig. 6. One of at least 3 new species of *Begonia* found growing on limestone rocks at low altitude near the Underground River.

Fig. 7. Mt Bloomfield seen looking west along the beach near Sabang. The ultramafic peak reaches 809 m in altitude.

Fig. 8. Participants of the Mt. Bloomfield ascent. Left to right: Tedy, Carmen Puglisi, Danilo Tandang, Mark Hughes.

## Outputs

A total of 108 herbarium collections was made, each with an associated silica dried sample for DNA extraction (see appendix). Duplicates have been deposited at E and PNH, and others will be distributed once all have been identified to species and any new taxa described. The collections cover both the limestone flora and the strikingly different low-canopy flora on adjacent ultramafic rock.

At least three new species of *Begonia* were found, some being very narrow endemics such as the species shown in Figure 5 which has the bulk of its population in only one site at the entrance to the underground river. These new species will be named in collaboration with botanists from PNH and the University of Manila; it is planned to give them names reflecting local tribes to highlight the value of plant conservation in Palawan. In addition we are producing a booklet on the botany of the PPURNP which can be used locally to promote eco-tourism and conservation.

## Funding

Davis Expedition Fund	£750
RBGE	£1040

Full accounts and all receipts are lodged at the finance dept. in RBGE.
